### Company response

Almette cream cheese is currently produced by Hochland subsidiaries in different countries and is also exported. The EU survey compares Almette cream cheese with herbs bought in Austria, Romania, Czech Republic and Lithuania.

Almette cream cheese for Austria and Romania is produced in our German plant in Schongau (Hochland Deutschland GmbH), Upper Bavaria. It is produced with alpine milk, i.e. milk from selected farms situated in the alpine region and alpine upland. The composition, ingredients and nutritional values of the product for Austria and Romania is therefore the same.

Almette cream cheese for Czech Republic and Lithuania is produced in our Polish plant in Wegrow (Hochland Polska) based on a Polish locally prepared recipe. Hochland Polska uses only Polish milk from selected Polish farms. The composition, ingredients and nutritional values of the product for Czech Republic and Lithuania is therefore the same.

Due to the different consumption behaviors and taste preferences in every country, the Almette portfolio consists of different varieties in different countries based on our group wide concept.

We use different production technologies and production processes in Germany and in Poland, which translates into the composition of the products: Almette cream cheese for Czech Republic and Lithuania (produced in Poland) contains less fat and salt than Almette cream cheese for Austria and Romania (produced in Germany). Also, the ingredients, such as herbs, for example, are sourced individually by Hochland Deutschland and Hochland Polska, and therefore may also differ in their composition and taste.

Almette	Cheese Spread Herbs	
---------	---------------------	--

Differences in labeling due to content of cream cheese, fat in dry matter and dry matter may differ because of local legal labeling requirements. The Czech Republic demands for example the labeling for the content of cream cheese, fat in dry matter and dry matter. Lithuania not.

As said Hochland Polska exports Almette cream cheese from Poland to the Baltic States. This distributor uses additional labels in order to provide the product declaration in the relevant national language. It turned out that the information due to flavour provided on the sticker was incorrect because of a mistake in translation by the distributor. The right wording is 'natural flavouring'. This mistake has been corrected by the distributor now.

In summary:

- there are independent recipes for the export markets of Hochland Deutschland (Austria and Romania) and Hochland Polska (Czech Republic, Lithuania) based on our group wide concept which is to respect local consumption behaviors and taste preferences
- we use different production technologies and production processes as well as different milk types in Germany and in Poland, which translates into the different composition of the products
- the composition, ingredients and nutritional values of the product for Austria and Romania is the same.
- the composition, ingredients and nutritional values of the product for Czech Republic and Lithuania is the same.

We would like to emphasize that our company attaches great importance to an uniformly high quality standard (food safety, hygiene) in all subsidiaries, in all countries and all Almette cream cheese recipes and production processes are in accordance with applicable law.

Alpro	Soya Original	
-------	---------------	--

**Company response**

It is Alpro's mission to provide tasty and healthy plant-based products to our consumers. Continuous improvements are made on products. The implementation of the optimised formula impacts many countries and is step by step being implemented in Europe. During this transition period both, old and new packaging can be found in EU countries. In optimising the performance of the Alpro soya original drink in coffee, the formula was revised. Tricalcium phosphate has been replaced by calcium carbonate.

The difference in % hulled soybean declaration originates from a recent data calculation from the production process. In a first step, hulled soybeans are soaked in water, grounded and filtered. This is the soya base, as such declared for the French market in line with the French industry standard, to which further ingredients can be added. The changes concern minor optimization steps, reflected in minor deviations in salt, fibres, sugars and calcium and an adapted soy %.

None of the elements discussed above should be considered as dual quality practices.

### Company response

As an international FMCG [fast-moving consumer goods] company, Bahlsen appreciates the freedom of the European Single Market. In 2018, we have started to harmonize the recipes of LEIBNIZ Minis Choco in our production regardless of target markets and production sites. Since the beginning of 2019, all of the mentioned products for the European Single Market are produced with the same recipes. According to the JRC [Joint Research Centre], differences have been detected across EU countries.

The alleged variances might be caused by

- differences in the regulations and consumers' understanding across countries
- different raw materials due to different suppliers delivering different plants
- the long shelf-life of some products (with old recipes) which are still available on particular markets

In addition, we would like to inform you that since spring 2022, all LEIBNIZ products throughout Europe have a new packaging design. Both the respective design and the respective recipe of LEIBNIZ ZOO Original and LEIBNIZ Minis Choco remain exactly the same. Only in case of differences in the regulations and consumers' understanding across countries labeling differences may occur.

### Company response

As an international FMCG [fast-moving consumer goods] company, Bahlsen appreciates the freedom of the European Single Market. In 2018, we have started to harmonize the recipes of LEIBNIZ Zoo in our production regardless of target markets and production sites. Since the beginning of 2019, all of the mentioned products for the European Single Market are produced with the same recipes. The difference found for Lithuania might be caused by our distributors who used old labels although they have been informed about relevant changes. We are currently working with our distributors on improvement measures to avoid labeling errors.

In addition, we would like to inform you that since spring 2022, all LEIBNIZ products throughout Europe have a new packaging design. Both the respective design and the respective recipe of LEIBNIZ ZOO Original and LEIBNIZ Minis Choco remain exactly the same. Only in case of differences in the regulations and consumers' understanding across countries labeling differences may occur.

### Company response

From our market research and sensory evaluations run with consumers from EU Member States, it has clearly emerged that consumers from outside Italy prefer a more spicy and herbal sauce; we have therefore adapted the international recipe to better reflect these preferences by adding aromatic herbs, spices (e.g., thyme).

In addition, as we are currently in the process to review all our labels, we have already planned to revise the international labels of the Bolognese sauce by highlighting the minor recipe differences between the Italian and the international version. Finally, please note that the Italian version of the product is already displaying a different name, i.e., 'Ragù alla Bolognese', whereas the international version only reports the name 'Bolognese'.

### Company response

We inform you that all Flora/Becel products subject of this study (except for Finland and Sweden) have the same recipe.

Hence, all consumers receive the same quality and therefore it can be concluded that the products are fully compliant with the Dual Quality rules under EU Directive on Unfair Commercial Practices.

Additional information:

- Omega 6 is not claimed in Austria and Germany although we do meet the requirements.
- The product from Sweden is unique to Sweden because of different local requirements for Vitamin D content.
- The recipe of the product from Finland is unique to Finland. Artwork, claims, pack format are totally different than all others identified.

We reserve the right to present our products to consumers in ways that they find attractive. The data collected are not current. It should be noted that products may be subject to continue change.

Bonduelle	Corn	
-----------	------	--

**Company response**

The 14 cans correspond to the same product: sweet corn variety, without added sugar. The composition and the nutritional values are identical but the labels differ as to reflect the different commercial zones' marketing designs (Czechia, Slovakia, Estonia, Lithuania, Latvia, Spain, Croatia, Italy, France, Austria, Luxembourg, Cyprus, Greece, Portugal). The Netherlands product corresponds to the above corn recipe but with reduced salt content in order to be compliant with the local VIGEF [Union of Dutch Fruit and Vegetable Processors] norm.

In conclusion, our products have different recipes with different labels according to consumer expectations and/or national regulation.

Bonduelle	Peas and carrots	
-----------	------------------	--

### **Company response**

Bonduelle has not defined a standard reference for peas & carrots in all countries. 10 different recipes have been checked, distributed indifferently in 17 countries, with different labels designs and contents.

The differences in the composition of the recipes are motivated by the consumer's preferences and by the specific regulations in the different countries:

- Salt and sugar content and presence or not of flavor.
- Different type of process:
  - Cyprus, Czechia, Slovakia, Slovenia, Germany, Denmark, Spain, France, Croatia, Hungary, Lithuania, Italy, Austria, Estonia, Greece
  - Belgium, the Netherlands
- Different varieties:
  - Garden peas: Slovakia, Czechia, Austria, Slovenia, Croatia
  - Peas: Cyprus, Germany, Denmark, Spain, France, Hungary, Italy, Lithuania, Netherlands, Belgium, Estonia, Greece
- Size or cuts of carrots: Croatia, Slovenia, Belgium
- Specific recipe with reduced salt content for the Netherlands, Belgium (VIGEF [Union of Dutch Fruit and Vegetable Processors] reform).

The slight differences in the nutritional values are explained by the above differences (different composition and vegetable varieties) and by the fact that Bonduelle appointed external labs to perform analysis and calculate the nutritional value.

In conclusion, our products have different recipes with different labels according to consumer expectations and/or national regulation.

### Company response

We differentiate the Capri Sun recipes according to consumer preference in countries or country clusters with similar taste preference, but at the same time the differences within EU are minimal and don't impact the product taste.

- The difference in water is related to the source of the water available in our different production sites.
- It is our strategy to gradually reduce sugar levels in our products, so we are gradually unifying them across EU.

Some of the discrepancies in the ingredient list might be due to the different formatting of the labels and translation.

Clever	Pineapple Cubes	
--------	-----------------	--

**Company response**

The ingredients for all three products are identical. The difference in nutritional values is due to fluctuating nutritional values of natural raw materials and the use of different suppliers, who use different calculation methods. Different suppliers are used due to a preference to use local suppliers/seller in each country, where possible and preferable based on logistics. Our products are undergoing a continuous development with a view to presentation and content. These products were sampled in the beginning of 2021 and have since undergone changes.

**Company response**

The testers did not test comparable product versions. In the depicted product pictures a creamy, higher fat strawberry cream-yoghurt bought in Czechia has been compared to lower fat strawberry yoghurts. The nutritional values of the other compared product versions are based on different calculation methods and designations of individual components ('yoghurt' vs. 'milk + microbotic cultures') due to local supply structures. Our products are undergoing a continuous development with a view to product presentation and content. These products were sampled in the beginning of 2021 and have since undergone changes.

Corona	Corona Extra	
--------	--------------	--

**Company response**

Corona Extra is a beer brewed to reflect Mexican heritage and traditions, and the taste and recipe do not vary, with the exception of the use of corn or rice as adjuncts, not affecting the taste. This means the Corona liquid is unified globally, since 2020. Hence, there are no liquid differences in terms of additives. We brew Corona for the European market both in Mexico and in Belgium.

JRC [Joint Research Centre] has noted a difference on labels in the market in 2021:

- A special note was made on the different references to maize and corn on our Corona-labels. We would like to point out that this is a terminology difference, not a difference in raw materials. We see it is correct to say both words are interchangeable.
- We acknowledge that, regardless of the liquid being substantially unified worldwide, we are still depleting old labels for a small number of markets. These old labels are still referring to certain additives, even if they are no longer used in the beer. We are finalizing rolling out all label changes in the coming months, with Romania and Bulgaria in May followed by Czech Republic and Hungary before summer.

Danone	Activia Nature	
--------	----------------	--

**Company response**

As a leading food company Danone has a responsibility to offer healthy food products, but also to promote health and help consumers adopt healthy diets and habits. All Danone products respect high quality standards wherever they are crafted and proposed to our consumers.

ACTIVIA Nature products come from seven production plants located in different countries throughout Europe. We must highlight the fact that products selected as ACTIVIA Nature includes three different products: ACTIVIA stirred plain, ACTIVIA set plain and ACTIVIA 0 % fat which are different in terms of process and recipes and as such their nutritional values are different and therefore such products are not comparable.

Moreover, slight unavoidable variance in nutritional values result mainly from the raw milk characteristics which can vary in function of seasonality and from one country to another in terms of fat and protein content and from non-significant differences in production lines.

Furthermore, marginal differences in labelling of ingredients may result from particular national requirements and local market practices. Details regarding ingredients and composition are communicated on the labelling and we guarantee that our products have the same characteristics across Europe.

None of the elements above should be considered as dual quality practices.

**Company response**

As a leading food company, Danone has a responsibility to offer healthy food products, but also to promote health and help consumers adopt healthy diets and habits. All Danone products respect high quality standards wherever they are crafted and proposed to our consumers.

Commenting on results received for our ACTIVIA strawberry which are crafted in eight production plants located in different countries throughout Europe, slight unavoidable variances in nutritional values result mainly from the raw milk characteristics – which by nature can vary in function of the seasonality and from one country to another in terms of fat and protein content and from non-significant differences in production lines.

Furthermore, marginal differences in labelling of ingredients may result from particular national requirements (for instance no harmonized yoghurt denomination across Europe) and local market practices. In any case, the details with regard to ingredients and composition are communicated on the labelling and we guarantee that our products have the same characteristics across Europe and follow the same identical Danone quality standard.

None of the elements above should be considered as dual quality practices.

**Company response**

Desperados Original is produced according to the same recipe and adhere to the same strict final product quality standards globally. In a very limited number of cases, markets are permitted to marginally deviate from this for local tax and legal compliance reasons. The testing results of the JRC [Joint Research Centre] clearly show the almost full harmonization of our recipes across all markets.

No divergence was identified for Desperados and this product should be removed from the list of those considered to have examples of divergent recipes.

In general across, all our other brands, local breweries have some limited flexibility to adapt the ingredients within the boundaries set in the Global Recipe. As an example, maize and glucose syrup both are used as a source of extract for the yeast, fully converted into alcohol and therefore interchangeable without affecting the final product properties. The options chosen are based on locally available ingredients and brewery capability to use these ingredients and to avoid additional environmental impact of using non-local inputs. In all cases, the final product properties must meet the same Global specifications and these are verified periodically on a central location. All choices of ingredients are clearly labelled on the primary packaging and available on-line for consumers.

### Company response

The pizza in Ireland is product in the factory in the United Kingdom. This results in small changes in the recipe or the nutritional values of the product in comparison to the pizza produced in the other EU-countries.

The nutritional values of the products are different since in the United Kingdom enriched wheat flour is used in contrast to the pizza in the other countries. The enriched flour has higher carbohydrate values, which results in a slightly higher carbohydrate and energy content in the product.

The cheese content in the product is the same; however, it is declared differently in the list of ingredients. Whereas it is declared as a mixture in Germany and the other countries 'Cheese (Mozzarella, Edam)', it is declared separately in the UK recipe 'Mozzarella Cheese, Edam Cheese'.

The pineapple pieces in the products are also the same; the ingredient is just named differently on the packaging. Ireland: 'Sweetened pineapple slices' or on other packages: 'canned pineapple' / 'tinned pineapple' / 'pickled pineapple chunks'.

In the future, we will appropriately label Ristorante Pizza in Ireland to inform about the difference from the rest of the international products.

**Company response**

The pizza in Ireland is produced in the factory in the United Kingdom. This results in small changes in the recipe or the nutritional values of the product in comparison to the pizza produced in the other EU-countries.

The content of mozzarella cheese in the products is the same, but it is declared differently in the UK product. There, the cheese is declared as a mixture of mozzarella and edam cheese 'Blend of Mozzarella and Edam cheese'. On the other products, the cheese is declared separately.

The amount of cherry tomatoes in the product from Ireland is slightly higher than in the other countries. This is a result of the different recipe for the pizzas produced in the United Kingdom.

In the future, we will appropriately label Ristorante Pizza in Ireland to inform about the difference from the rest of the international products.

### Company response

The pudding powder for the 'Original Pudding' that is sold in many different countries with the same packaging has the same recipe (unprepared = content of the pack) in all the countries, which is why the package content is nearly the same and there are no differences in the nutritional values. Only the way of preparation varies from country to country, that is why the nutrients seem to be different as they refer to the ready prepared product.

For the product in the Netherlands, the sugar is already added in the product, but with regard to the prepared product it is also the same as the Original Puddings.

### **Company response**

We confirm that only one recipe of Nutella is manufactured in the different Ferrero Plants and there is no difference in the composition of the product marketed in the different Member States of the European Union.

The ingredients list is the following:

*Ingredients: Sugar, palm oil, **HAZELNUTS** (13 %), skimmed **MILK** powder (8.7 %), fat-reduced cocoa (7.4 %), emulsifier: lecithins (**SOY**), vanillin.*

Lastly, we would like to take the chance to inform you that, starting from November 2021, the percentage of cocoa (7.4 %) was included in the ingredients list also for Germany and Austria on a voluntary basis.

**Company response**

We confirm that only one recipe of Tic Tac Mint is marketed in the different countries of the European Union.

Concerning the additive 'magnesium salts of fatty acids', we would like to confirm that this substance is used as processing aid and, therefore, it is voluntarily labelled according to national practices and market habits.

However, for the sake of harmonization, we would like to inform you that the mention of this additive is being progressively included also on the labels of the countries where it was previously omitted.

### Company response

Although these look to be the same products they are different by market and by brand. This is based on the history of the brand in that market and other market driven preferences.

Most of our products are designed by market and most have been sold in those markets for many years. We take the issue of dual quality very seriously and have clear internal processes to ensure that we do not mislead consumers who may travel across the community. We do not believe that any of our products are significantly different enough to be considered as in contravention of this standard. We saw variations in the test outputs in the last round which were impossible for us to explain, given that the exact same product was sold in multiple markets and yet the tests seemed to indicate that there was a difference.

### Company response

The differences in nutritional values and ingredients follow from the fact that, in addition, to the partly divergent national legal requirements, different taste habits and consumer acceptances prevail in the individual countries. This was considered while developing the recipes for the Freeway Orangeade for the individual countries. Furthermore, we obtain the products for the individual countries from several producers, which are mainly located in the country of sale. Moreover, each producer can be subject to different production conditions, which again may affect the recipe and with this the nutritional values. However, this is always the same product with consistent quality requirements for a standard Orangeade. The allocation of which producer supplies which country is particularly affected by logistics routes and production capacities of the manufacturer.

#### Company response

The differences in nutritional values follow from the fact that we purchase the product Freshona Tomato passata from several producers. The recipe is uniform for each producer; it may vary slightly between producers in terms of nutritional profile due to natural variations of raw material for the same product. However, this is always the same product with the consistent quality requirements for a standard Tomato passata. In addition, each producer can be subject to different production conditions, which again may affect the recipe and with this the nutritional values, such as for example the use of citric acid to adjust the pH value.

Häagen-Dazs	Vanilla	
-------------	---------	--

**Company response**

We would like to confirm that at Häagen-Dazs our foremost priority is to produce the best quality ice cream, with only a selected few and quality ingredients.

Therefore, we want consumers to enjoy the same quality of ice-cream wherever and as such we use exactly the same recipes for all markets in which we operate.

Our packs for Häagen-Dazs vanilla pint aligned across EU countries where we commercialize this product and there is no difference in the nutritional values between them.

Heineken	Heineken lager beer	
----------	---------------------	--

**Company response**

Heineken™ is produced according to the same recipe and adhere to the same strict final product quality standards globally. In a very limited number of cases, markets are permitted to marginally deviate from this for local tax and legal compliance reasons. The testing results of the JRC [Joint Research Centre] clearly show the almost full harmonization of our recipes across all markets.

The only divergence highlighted in the testing results is that of Ireland, where the alcohol content of Heineken is lower as this is in line with the rest of the beer market in that country. This is very clearly not an issue of dual quality and is clearly labelled.

In general across, all our other brands, local breweries have some limited flexibility to adapt the ingredients within the boundaries set in the Global Recipe. The options chosen are based on locally available ingredients and brewery capability to use these ingredients and to avoid additional environmental impact of using non-local inputs. In all cases, the final product properties must meet the same Global specifications and these are verified periodically on a central location. All choices of ingredients are clearly labelled on the primary packaging and available on-line for consumers.

### Company response

For Heinz Seriously Good Mayonnaise the only difference is that the type of oil used will be either rapeseed oil or soya oil depending on the consumer preference in the country.

Heinz	Tomato Ketchup

Kellogg's	Corn Flakes the Original	
-----------	--------------------------	--

**Company response (for all Kellogg's products included in the study)**

We can confirm that our foods are produced and sold in compliance with all relevant EU regulation. As a European business, we produce multilingual boxes that are shared across a number of European countries. Where differences occur, they are very limited and are driven by a difference in regulation of fortified foods in certain parts of Europe.

Fortification of breakfast cereal plays a vital role in the micronutrient intake of the European population. For instance, an EU-funded study of adolescent dietary patterns across nine European countries showed that breakfast cereal consumers have a higher Diet Quality Index score compared with non-breakfast cereal consumers and greater intakes of dietary fibre, B vitamins, calcium, magnesium and phosphorus, compared with a bread-based breakfast or other breakfast <sup>(1)</sup>.

Despite the existence of EU Regulation No. 1925/2006 on the addition of vitamins and minerals, certain Member states, including Germany and Denmark, restrict fortification of breakfast cereals beyond the EU regulation.

The differences between the Corn Flakes, Special K Original and Special K Red Berries variants for boxes that are shared with Germany and Denmark and those that are not shared with those countries are driven by this non-harmonised regulation of fortification, which unfortunately prevents us from having the same recipe across Europe.

The slight differences in nutritional values other than vitamins and minerals of Special K Original and Special K Red Berries is due to the coating used for fortified cereals, which improves the shelf-life of the vitamins.

### Company response

As communicated in occasion of your previous reports, our Kinder Pingui marketed in the Member States of the European Union is produced in two different plants built over time, first in Italy and later-on in Germany, thus the recipes had to be slightly adapted to different technological needs and manufacturing feasibility.

Despite these differences in the production lines, Ferrero endeavored to manufacture excellent products with similar doses and equivalent consumer perceived quality. Both recipes were treated in exactly the same manner from a quality assurance and quality control point of view, including all food safety parameters, raw material controls, distribution controls and testing.

Kinder	Pingüí	
--------	--------	--

Therefore, Ferrero always considered the products manufactured in the two plants of equivalent quality and, in fact, in several cases they were both marketed (in different formats) in the same country

Nevertheless, in the context of a continuous improvement process, Ferrero decided to make an important investment to align the technology and manufacturing processes in the two plants, allowing the production of Kinder Pingüí with a fine-tuned recipe.

Since September 2021 Kinder Pingüí marketed in all EU markets has identical ingredient list and nutritional facts, no matter whether it is produced in our German or Italian plant.

Following you may find the details of the product currently manufactured in the two plants:

*Sponge cake with fine chocolate and milky (48.5 %) and cocoa (12.5 %) filling*

Ingredients: pasteurized **MILK** 24 %, fine chocolate 22 % (sugar, cocoa mass, cocoa butter, emulsifier: lecithins (**SOY**), vanillin), sugar, palm oil, skimmed **MILK** powder 9.5 %, **WHEAT** flour 8 %, cocoa butter, anhydrous **MILK** fat, dextrose, fine **MILK** chocolate 1 % (sugar, **MILK** powder, cocoa butter, cocoa mass, emulsifier: lecithins (**SOY**), vanillin), fat-reduced cocoa 0.9 %, **EGG** powder (0.7 %), baker's yeast, emulsifier (mono- and diglycerides of fatty acids, lecithins (**SOY**)), flavourings, salt, barley malt extract powder.

**Company response**

For most EU markets, the nutrition values are given for the product in solution, as per recommended product use instruction. However, in some markets the nutritional values are declared per 100 grams of product sold and after dilution in water, which may result in differences in nutrient values.

We offer different versions of Knorr Beef Bouillon Stock Cubes across Europe, which vary in terms of pack size and recipe but are not marketed as similar.

### **Company response**

As a food producing company we take our responsibility regarding food safety and food quality very seriously. Consequently we undertake all steps reasonable in order to fulfil legal requirements and to come up to our customers' expectations. Therefore we have clear specifications our suppliers have to comply with. All incoming lots are analysed according to the requirements of our quality control system which is – as we are certified according to IFS Food on Higher Level and ISO 9001:2015 – based on the principles of HACCP [hazard analysis and critical control point].

We can assure you that we make very high demands on the quality of our products and that for sure there is no difference regarding the quality in one or the other country. We have one standard all our products have to be in compliance with.

If slightly differences are detected this can only be explained by different lots of raw materials, different times of production and related to that by variations in turnover periods. As our products are natural products whose quality is beyond that influenced by climatic conditions we have to deal with these differences at the best. It is a challenge to keep the defined quality standards year by year – but nevertheless we manage rejecting goods that do not meet our requirements consequently.

Summing up we want to point out that it is absolutely not our intention to sell different qualities in different countries – on the one side we are not capable of doing so as we have to handle more than 4 500 different articles on our production site here in Wolkersdorf (Austria) on the other side we are aware of the impact on our brand and undertake all steps in order to protect its image at the best. We are a small family-run concern that is proud of a more than hundred year old tradition in the world of spices – spices are our passion and we benefit from our experience and knowledge which we have obtained in these years just to deal with these valuable and fascinating natural resources to make the most of them.

Lay's	Potato chips salted/nature	
-------	----------------------------	--

**Company response**

As noted in previous surveys, in all markets, Lay's Salted/Nature potato chips are made to the same recipe specification from potatoes, a blend of vegetable oils and salt. Vegetable oils are selected from sunflower, rapeseed and corn oils depending on local availability and historic preferences, with slight differences in nutrition information resulting from minor manufacturing variances and the agricultural nature of potatoes.

Löwenbräu	Original lager	
-----------	----------------	--

Front label pictures

### Company response

Following JRC's [Joint Research Centre's] research in 2018 and 2019, it was decided to create 2 different beverages: 'Löwenbräu Original', brewed (according to the specific Reinheitsgebot) and sold in Germany and 'Löwenbräu Lager', brewed and sold outside Germany. The differentiation between these 2 products is established in very diverse visual brand identities, different product names and different ABV [alcohol by volume] levels, driven by relevance and preference in the market.

It is clear that the distinct packaging and name avoids confusion: consumer testing confirmed the consumers perceive Löwenbräu Lager as a different beer.

### **Company response**

Based on the data shared by the JRC [Joint Research Centre], we confirm that there is no Dual Quality in EU markets supplied with M&M's Chocolate. There are no significant nor material differences in the products sampled. They are produced in two separate factories, (Poland and France), both supplying the same product across the EU regardless of whether the market is east or west of EU. Some negligible differences in nutritional values result from updated rounding rules rolled out at different times in both factories. These rounding rules are in the process of being harmonised. The minor variance in milk chocolate QUID [quantitative ingredient declaration] values (68 %, 69 % and 70 %) is due to a combination of different rounding rules and updated product specifications. 68 % should be rounded up and will be corrected as packaging materials are being updated. The other variation is due to technical equipment in both factories, e.g. requiring a different blend for raw material but leading to the same nutritional profile.

### **Company response**

Maggi bouillons meet high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients.

There are two different technologies to produce bouillons which result in products with different properties:

- Hard bouillon technology: the mix of salt, spices, vegetables are mixed and pressed under high forces to make a tablet. We use this technology in countries where consumers like to crumble the tablet over the dish.
- Soft bouillon technology: the mix of salt, spices, vegetables are mixed to form a dough that is moulded to form a tablet. We use this technology in countries where consumers like to melt the tablet in the pan or pot.

### Beef hard bouillon

We have 6 unique recipes available in Austria, Germany, Luxembourg, France, the Netherlands, and Romania, according to consumer preference.

### Beef soft bouillon

We have 4 recipes available in Europe that are clustered according to local consumer preference.

- The products tested in Finland and Austria are each a unique recipe.
- The products tested in Hungary, Slovakia and Czechia have the same recipe however with different artworks.
- The products tested in Estonia, Latvia, Lithuania and Portugal have the same recipe however with different artworks.

**Company response**

Maggi bouillons meet high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients.

Chicken hard bouillon\*

We have 5 recipes available in Europe that are clustered according to local consumer preference.

- The product tested in Austria, the Netherlands and Finland, are each a unique recipe.
- The products tested in Lithuania, Romania, Bulgaria all have the same recipe however with different artworks. We believe an old recipe was tested in Bulgaria.
- The products tested in Spain and France have the same recipe however with different artworks.

Chicken soft bouillon\*

We have 3 recipes available in Europe that are clustered according to local consumer preference.

- The products tested in Hungary and Portugal have the same recipe however with different artworks.
- The products tested in Slovakia and Czechia have the same recipe.
- The products tested in Cyprus and Greece are different recipes and are in the process of being harmonized to only one recipe.

\*The difference between 'Hard bouillon technology' and 'Soft bouillon technology' is described under Maggi beef stock cube.

**Company response**

Based on the data shared by the JRC [Joint Research Centre] we confirm that there is no Dual Quality in EU markets supplied with Mars bars. There are no significant nor material differences in the products sampled. Products sampled are produced in three factories, in different countries (Poland, the Netherlands and the United Kingdom), all supplying the same product across the EU regardless of whether the market is in the east or west of EU. Some negligible differences in nutritional values stem from updated rounding rules rolled out at different times in the three factories. Other minor variations are due to technical equipment in the three factories requiring a different blend for raw materials but leading to the same nutritional profile.

**Company response**

Based on the data shared by the JRC [Joint Research Centre] we confirm that there is no Dual Quality in EU markets supplied with Snickers bars. There are no significant nor material differences in the products sampled. Products sampled are produced in three factories, in different countries (Poland, the Netherlands and the United Kingdom), all supplying the same product across the EU regardless of whether the market is in the east or west of EU. Minor variations are due to technical equipment in the three factories requiring a different blend for raw materials but leading to the same nutritional profile. Other negligible differences in nutritional values stem from updated rounding rules rolled out at different times in the three factories. Certain small variations are due to technical equipment and production method e.g. the British factory requiring the addition of a very minor level of coconut oil (0.15 %) due to differences in equipment but leading to similar nutritional profile.

**Company response**

The minor differences in nutritional values follow from the fact that we purchase the product Milbona Emmental slices from several producers due to the high quantities we require for the individual countries.

The recipe and the nutritional profile is uniform for each producer. However, the nutritional profile may vary slightly between producers for the same product. In the case of Milbona Emmental slices, the raw material in the production process used is milk, which as a natural product is subject to natural variations.

However, this is always the same product with consistent quality requirements for a standard Emmental 45 % fat in dry matter. The allocation as to which producer supplies which country is particularly affected by logistics routes and production capacities of the manufacturer.

### Company response

We offer goods of the same brand in packages of different weight or volume in different geographical markets. This survey is comparing different product sizes. We are updating the labels and the survey has compared outdated product labels with updated ones.

**Company response**

We differentiated the packaging to avoid consumer confusion using the JRC [Joint Research Centre] methodology. The products with the same packaging now have the same nutrients.

**Company response**

We offer goods of the same brand in packages of different weight or volume in different geographical markets. This survey is comparing different product sizes. We are updating the labels and the survey has compared outdated product labels with updated ones.

**Company response**

The samples compare updated labels with outdated labels. Therefore the nutrient declarations vary because the labels in the meantime have been updated across the EU. 1 990 kJ is the value for the old Oreo labeling and 1 997 kJ is the value for the updated Oreo labeling. As you can see also the salt levels are different depending on the old or updated labels.

Nestlé	Fitness Nutritious Energy	
--------	---------------------------	--

Front label pictures

**Company response**

Fitness cereals meet high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients.

There is only one factory in Europe that produces the single recipe Fitness cereal for all countries.

The small differences in nutrition facts declaration can be due to different application of rounding rules, aligned with local control authorities' expectations. We are taking action to better align this where local enforcement allows us to do so.

Differences in ingredient lists can be explained by local interpretation of EU regulation (e.g. stricter interpretation of fortification regulation could lead to declaring chemical form of minerals). All countries translate the same ingredient list from a centralised document (in English) into the local language.

**Company response**

KitKat products meet high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients. In Europe, KitKat is produced according to the same recipe in 3 factories: York (United Kingdom), Hamburg (Germany) and Sofia (Bulgaria). Production from York has a historical difference due to another process based on the traditional way the milk is supplied (fresh milk) which is not done in the other two factories.

The product tested in Luxembourg has a pack that is from the former recipe produced in Hamburg (Germany) which has been harmonised with the other countries. This difference is therefore no longer existing.

### Company response

Nan OptiPro 2 meets high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients.

We regularly undertake portfolio simplification and harmonization of recipes. The products tested in this study do not correspond to the recipes now present in the corresponding countries.

For products tested in Spain, Romania, Portugal, Bulgaria, and Slovenia, the recipe contains oligosaccharides, which impacts the ingredient lists and the nutritional values. This is transparently indicated on the front-of-pack of the products.

Nan OptiPro 2 products are not in the scope of the EU Guidelines for tolerances and rounding rules. Due to the different tolerances and rounding rules applied by local authorities for such products, it is technically not feasible with the same production of a recipe to have exactly the same nutritional declaration for all the nutrients in the different countries.

**Company response**

There are 3 different Nescafé 3 in 1 recipes existing across Europe, made of the same main ingredients with slight variations to cater to local consumer preferences

- Recipe (A): Austria, Belgium, Bulgaria, the Netherlands, Estonia, Latvia, Lithuania, Romania, France, Germany, Slovakia, Sweden, Slovenia
- Recipe (B): only Hungary (based on a consumer preference study)
- Recipe (C): the United Kingdom, Spain, Ireland

We have an on-going recipe development and consumer research to harmonise our Hungary recipe with recipe (A).

Nestlé	Nesquik cereal	
--------	----------------	--

**Company response**

Nesquik cereals meet high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients.

We have only two recipes across Europe produced in four factories: one non-fortified recipe and one fortified recipe. The products tested in Spain and Portugal have differences that can be generated by the phasing of recipe adjustments.

The small differences in nutrition facts declaration can be due to different application of rounding rules, aligned with local control authorities' expectations. We are taking action to better align this where local enforcement allows us to do so.

Differences in ingredient list can be explained by local interpretation of EU regulation (e.g. stricter interpretation of fortification regulation could lead to declaring chemical form of minerals). All countries translate the same ingredient list from a centralised document (in English) into the local language.

**Company response**

Nesquik meets high quality and standards, and consumer expectations across the EU. All the recipes tested are made from the same main ingredients.

Since 2020, all Nesquik recipes across the EU have been harmonized. All factories producing Nesquik in the EU use the exact same raw material specification and sourcing.

The product tested in Spain will remain specific due to local consumer preferences for a slightly lighter colour. Otherwise, the recipe is exactly the same as in other factories, with the same nutritional values on pack.

Products tested in Germany and Denmark have the same nutritional values, which are different from the other markets, in order to comply with the local authorities' position on the application of the EU regulation on fortification which is not yet fully harmonised.

The products tested in Estonia, Latvia and Germany are declaring calcium values on powder. The recipes are identical for Estonia and Latvia. For Germany, the difference is coming from a stricter position from local authorities (as it is not fully harmonised at EU level). We are taking measures to modify the pack and align calcium values for these countries, in accordance with local regulation.

**Company response**

The EU production for Nestea lemon is shared between Nestlé and another manufacturer. In the countries where Nestlé distributes Nestea Lemon, the products meet the same high quality and safety standards and consumer expectations across the EU, and the recipe and packaging are the same.

### Company response

Danone Specialised Nutrition represents a portfolio of science-based nutritional solutions designed to positively impact health through food for people who need it most, and at the most critical times of their lives, from preterm infants to old age.

Infant formula composition is influenced by local regulation, and guidance from local, regional or global authorities such as Codex Alimentarius. The composition of Aptamil 1 Infant Formula is similar across the EU markets and complies with the requirements of Commission Delegated Regulation (EU) 2016/127 regarding the essential composition of infant formula. In addition, as science progresses, our infant formula contain optional nutrients such as GOS/FOS [galacto-oligosaccharides/fructo-oligosaccharides], ARA [arachidonic acid] and DHA [docosahexaenoic acid].

None of the elements above should be considered as dual quality practices.

### Company response

Danone Specialised Nutrition represents a portfolio of science-based nutritional solutions designed to positively impact health through food for people who need it most, and at the most critical times of their lives, from preterm infants to old age.

Aptamil 3 Young Child Formula are milk-based drinks intended specifically for young children (1–3 years of age) and are designed to support their nutritional needs as part of a balanced diet. The composition of Aptamil 3 is very similar across the EU markets and contain important micronutrients in a young child's diet such as iron, vitamin D, calcium and vitamins B12. Evidence shows many young children 1 to 3 years of age do not receive sufficient levels of these key nutrients for healthy growth and development.

We are continuously looking for ways to further improve our product offer for this age group and constantly adapt our range of products by adding ingredients and bringing compositional changes as permitted by local laws and regulations. We are transparent about these recipe changes and welcome dialogue about parents' and caregivers' expectations, preferences and understanding of our products.

None of the elements above should be considered as dual quality practices.

**Company response**

The slight differences in nutritional values and ingredients follow from the fact that we purchase the product Ocean Sea Fish Fingers from several producers. The recipe is uniform for each producer but may vary slightly between producers in terms of nutritional profile and due to natural, seasonal variations of raw material for the same product. All Fish Fingers are made of Alaska Pollock fillet with 65 % fish content.

**Company response**

As part of PepsiCo's 'Winning with Purpose' vision and in line with our commitments under the EU Code of Conduct on Responsible Food Business and Marketing Practice, we are currently executing a voluntary strategy to reduce added sugar in our EU soft drinks portfolio, including in Pepsi Cola, while maintaining the great taste of our beverages. Whilst details of timings for roll-out in individual countries are commercially sensitive, we can confirm that this is an ongoing multi-year process, during which acceptance of new recipes by consumers with differing cultural and taste preferences is a critical element. For this reason, ingredients and nutrition values for this brand may vary in different countries during this period and will always be clearly labelled including through declaration of the energy content through front of pack icons *(original response received April 2022)*.

*Update September 2022:* We are happy to inform you that, to date, Pepsi Cola in 23 out of the 27 EU Member States contains ~ 7 grams of sugar per 100 ml, compared to 10.8 grams per 100 ml in 2019. We are working towards also introducing the 7 grams version in the remaining 4 EU markets in 2023. It should also be highlighted that we have reached a higher level of harmonization by removing the gum arabic in Pepsi cola in the EU.

Philadelphia	Cream cheese garlic and herbs	
--------------	-------------------------------	--

Front label pictures

**Company response**

The differences in ingredient lines are driven by different national laws. Differences in nutrition information is driven by the different garlic & herbs and herbs varieties under the Philadelphia brand (there are no East/West differences, but differences are adapted to local consumer preferences). There are 'light' versions in the Philadelphia varieties (10 g fat/100 g compared to 20 g fat/100 g) which explain the differences in nutrition information.

**Company response**

There are no East/West differences in Philadelphia Cream Cheese Original and they all share the same recipe, except in Italy, Spain and Portugal.

Italy, Spain and Portugal have different recipes from the rest of the EU because the products are being produced in a different factory and the national dairy legislation is different in these countries. Moreover, the recipes in Italy, Spain and Portugal have different fat and salt levels. This is due to taste differences that are important to the local consumers. Also the recipe in Spain contains preservatives because consumers prefer a longer shelf life once the pack is opened.

**Company response**

The results are proving that we, apart from one exception (Hungary), use the same recipe for Pom-Bear in all countries, independent whether the product is sold or produced in Eastern or Western Europe. The very few noted marginal differences in package declarations are only based either on different declaration practices in the local markets (e.g. declaring exact or rounded figures) or in the case of minimal deviations in fat content due to the use of different frying equipment.

With regards to the product sold in Hungary the noted difference in lower salt and higher protein content are due to a slightly different recipe in order to match local legislation.

In addition to the information already available on the packages (nutritional information on the front of the packages and ingredients list on the back of the packages), we are working on solutions to indicate deviations even more visibly on the front of the package without having to destroy already existing packaging material.

Pringles	Original	
----------	----------	--

### Company response

The products that have been compared are not up to date and the differences observed are due to the rollout of a new recipe. For instance, some older products mention ingredients like yeast extract, which was removed from the recipe about two years ago, and wheat starch, which has been replaced with wheat flour.

All Pringles products produced for EU countries are either produced in Belgium or Poland using exactly the same recipe, and are compliant with all relevant European Regulations.

The current ingredient list for Pringles Original for labels printed after 1 July 2022 in all EU countries is as follows: dehydrated potatoes, vegetable oils (sunflower, palm, corn) in varying proportions, wheat flour, corn flower, rice flour, maltodextrin, emulsifier (E471), salt, colour (annatto norbixin).

The corresponding nutrition information is as follows:

**Company response**

The differences in the nutritional values you found on the label for the product sold in Germany are not linked to differences in the product recipe but to a different way to express them.

In fact, for the products sold in all the European countries we express the nutritional values on the whole product except for the product sold in Germany where we express them on the drained weight. This choice comes from a market survey: we found that the most relevant competitor products from the TOP 10 SKU (Tuna in olive oil range) in Germany mention the nutritional values referred to the drained weight instead of to the whole product.

**Company response**

Different own brand suppliers (one the hand for Slovenia and Croatia and on the other hand for Austria) are procured from and different packaging is used. Thus, the marginal difference can be well explained and justified by slightly different production processes and the sourced ingredients in the respective countries. In Hungary, this product is no longer sold, thus, the comparison has to be limited to Austria vs. Slovenia & Croatia.

**Company response**

Consumers are always at the center of what we do. As the leading global brewer, we listen to our consumers around the world and brew our beers to highest standards of quality. In many EU markets as well as in the other continents our distinct green Stella Artois bottle is available with an ABV of 5 % to match the broader consumer preferences (to be rolled out worldwide.)

All Ingredient's lists are in mother languages, as presented on primary packages/ labels.

Shortly list of ingredients for Stella Artois: water, **barley malt**, hop. Barley malt bolded as an allergen.

### Company response

Earl Grey has become the generic term for any black tea with the taste of Bergamot (a citrus fruit). Earl Grey Teas are offered by numerous tea companies including TEEKANNE. TEEKANNE offers different Earl Grey recipes depending on regional taste preferences and the positioning of each product (we even offer different Earl Grey teas within one country). But the packaging design clearly differentiates the different Earl Grey recipes. Identically looking products will always contain identical recipes.

The products shown for Hungary, Slovakia, Czechia and Slovenia are the same (Slovenia being presented vertically). The products shown for Latvia is an old version from a German product and the product shown for Croatia is from our Austrian assortment. Both were not shipped to those countries by TEEKANNE.

### Company response

All products shown contain 100 % Green Tea. Green Tea is the correct name of any Green Tea according to regulations such as the German guidelines for tea ('Leitsätze für Tee und teeähnliche Erzeugnisse') and the Austrian Tea Codex. The products shown for Slovakia and Poland are the same, once presented vertically and once horizontally.

The Coca-Cola Company	Coca-Cola Original Taste	
-----------------------	--------------------------	--

**Company response**

Coca-Cola Original Taste is available in more than 200 countries worldwide. It contains the same mix of ingredients and it can be sweetened with cane sugar, beet sugar, corn-derived sweeteners (including in the United States) or a blend of these. The nutritive sweeteners are substitutable as they feature a similar composition, contain almost the same calorie content and are also regulated equally by existing EU legislation. In Coca-Cola Original Taste, the local sweetener we use has been primarily selected due to local considerations such as the regional availability of ingredients. Sourcing our ingredients locally ensures we can both support local supply chains and economies and maintain the affordability and taste of our beverages. All our beverages undergo the same stringent quality tests around the world from supply of ingredients to testing finished products. In line with EU legislation, we transparently include information on all our ingredients in our labelling, alongside nutritional content. To ensure that we maintain the same taste, corn-derived sweeteners are used in marginally higher quantities than sugar, which explains the nutritionally negligible differences referenced in the nutritional table (on pack).

### **Company response**

Fanta Orange is currently available in several recipes across the European Union, with differences in recipes ensuring that we meet local consumer preferences and expectations, source some ingredients locally, adhere to local regulation and that we can further accelerate our efforts to reduce added sugars in our beverages. All our Fanta Orange recipes contain orange juice, and although juice quantities vary due to reasons such as past regulations, they remain in line with comparable local products in each country.

The formula used in the great majority of European countries is the one featuring a juice content is around 5% in line with the market competitive offerings each time. Few exceptions occur in a few European markets driven mainly by regulatory reasons such as Italy, Greece, Spain or by consumer preferences and the competitive landscape such as France and Ireland.

Our sugar reduction efforts remain an important priority and over the past decade we have reduced added sugar in Fanta recipes in several EU countries by up to 30 %. This is a gradual and ongoing process as recognised by the Council conclusions on food product improvement (2016) to 'ensure consumer acceptance of improved products' and recognising 'cultural differences in preferences'. All relevant ingredient and nutritional information is clearly labelled on our products

We also inform consumers through our print and online advertising that they can find out about any differences in recipes across Europe, via the dedicated brand website in each country.

### Company response

Fuzetea was launched in Europe in 2018 and is now available in two different recipes. One recipe is made with tea extract and the second recipe contains brewed tea. The two products are marketed in a clearly different way and therefore they are out of scope of the legislation that seeks to address misleading practices. We are considering to further enhance the differentiation on label between the product with brewed tea and that with tea extract.

### Company response

At Tulip Food Company, we produce many different types of Luncheon Meat products sold under our own brands or the customer's private label brand for resale in 120 countries around the world.

The recipes may differ from market to market if this is required due to specific legal requirements under national food laws, customer requirements, consumer preferences regarding taste and general market conditions including price points, the competitive market conditions etc. Sometimes pork, sometimes chicken, sometimes sweet, sometimes spicy, sometimes lighter, sometimes fatter and so forth. In the example provided, the recipe for the 'Luncheon Meat' marketed in Italy is a completely different recipe than the recipe for the 'Luncheon Meat' marketed in Germany.

In some markets, e.g. Germany, the law sets certain standards for products like ours. In other markets, market conditions 'dictate' qualities or standards. Together with our distributors and customers we agree on the quality, texture and taste of the products suitable to the specific customer requirement or market conditions without compromising legal requirements or food safety and always upholding our strict quality standards.

### **Company response**

The blend sold in the Republic of Ireland is the same one that is also sold in the UK market, with shared labels and designs. The key reason for the difference between the Earl Grey sold in the United Kingdom and Republic of Ireland and that sold in all other EU Member States is the typical way the products is prepared and consumed in these markets. In the United Kingdom and Republic of Ireland, the tea is far more likely to be consumed with milk and therefore we have specifically developed an Earl Grey blend that caters to this preference. The consumers in other EU Member States are far more likely to consume the tea without milk and therefore this blend is designed to be consumed without milk. The amount of bergamot flavouring used in the United Kingdom and Republic of Ireland blend is slightly higher in order to compensate for the addition of milk yet still deliver the classic Twinings Earl Grey taste our consumers expect.

Neither blend is of any higher quality than the other, but are designed to give the best consumer experience in the markets they are sold based on typical preparation practices and taste preferences.

The Earl Grey marketed in Republic of Ireland has a significantly different label design and presentation versus Earl Grey marketed in the rest of the EU Member States, the two labels could not be confused with one another. Both labels are fully compliant with the provisions of Regulation (EU) No 1169/2011 of the European Parliament and of the Council of 25 October 2011 on the provision of food information to consumers with full information on flavourings provided in the ingredient lists.

**Company response**

We note your finding of no difference between the Pure Green Tea products sold throughout all EU Member States. These products are comprised of 100 % green tea in all markets. All labels are fully compliant with the provisions of Regulation (EU) No 1169/2011 of the European Parliament and of the Council of 25 October 2011 on the provision of food information to consumers.

**Company response**

The highest energy value is driven by the high level of dairy fat in Italy, which is not marketed similar as our labels elsewhere in Europe.

Differences reported in different markets are linked to our update of the nutritional data and the fact that the product analyzed in the different market might have been produced in year n or year n + 1 of our change. Differences in the quantitative ingredients declaration are also driven by the portion analyzed (120 ml vs. 90 ml).

**Company response**

Difference in ingredient declarations reflect flexibility which is allowed for the customary or descriptive name of an ingredient or sequence of listing ingredients when less than 2 % in weight. The differences that are purely related to local legal standards for mayonnaise (on fat level and egg yolk level).

**Company response**

The product recipe has been changed, and artworks have been updated accordingly to reflect the ingredients and nutritional values of the product inside. It may take up to one year to roll out a recipe change to all European markets and it may take longer for existing products with the previous recipe to be sold through. In addition, the differences in the nutritional values are very minor and Mars Wrigley does not believe they constitute a significant difference.

## **GETTING IN TOUCH WITH THE EU**

### **In person**

All over the European Union there are hundreds of Europe Direct centres. You can find the address of the centre nearest you online ([european-union.europa.eu/contact-eu/meet-us\\_en](https://european-union.europa.eu/contact-eu/meet-us_en)).

### **On the phone or in writing**

Europe Direct is a service that answers your questions about the European Union. You can contact this service:

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696,
- via the following form: [european-union.europa.eu/contact-eu/write-us\\_en](https://european-union.europa.eu/contact-eu/write-us_en).

## **FINDING INFORMATION ABOUT THE EU**

### **Online**

Information about the European Union in all the official languages of the EU is available on the Europa website ([european-union.europa.eu](https://european-union.europa.eu)).

### **EU publications**

You can view or order EU publications at [op.europa.eu/en/publications](https://op.europa.eu/en/publications). Multiple copies of free publications can be obtained by contacting Europe Direct or your local documentation centre ([european-union.europa.eu/contact-eu/meet-us\\_en](https://european-union.europa.eu/contact-eu/meet-us_en)).

### **EU law and related documents**

For access to legal information from the EU, including all EU law since 1951 in all the official language versions, go to EUR-Lex ([eur-lex.europa.eu](https://eur-lex.europa.eu)).

### **Open data from the EU**

The portal [data.europa.eu](https://data.europa.eu) provides access to open datasets from the EU institutions, bodies and agencies. These can be downloaded and reused for free, for both commercial and non-commercial purposes. The portal also provides access to a wealth of datasets from European countries.

# Science for policy

The Joint Research Centre (JRC) provides independent, evidence-based knowledge and science, supporting EU policies to positively impact society

**EU Science Hub**
